

IN FREIGHT, YOU NEED A NOSE FOR PROFIT.

If you're serious about freight, the 747 is your freighter. With the lowest operating costs of any freighter airplane in service or development, 747-400 models can carry 124 tons nearly 5000 miles. Plus it's the only freighter with both side and nose cargo doors. To make loading more efficient and give you the flexibility to carry higher-yield outsized cargo. To make your cargo business more profitable. And that's nothing to sneeze at.
